[How to Update WPNotif Plugin](#)

Install & Activate WPNotif Plugin

There are two different ways to install a Digits plugin.

From WordPress Admin Dashboard (/wp-admin)

1. Download the "Files" using CodeCanyon - "Downloads" tab
2. Unzip the downloaded .zip file
3. Login to your WordPress Administration Panel.
4. Select the Plugins, then Add New.
5. Select Upload Plugin.
6. Browse your computer to select "wpnotif.zip" file.
7. Click Install Now and WordPress will do its magic and install the Plugin.
8. After the installation is completed, Activate the plugin.

Via FTP

We recommend that only advanced users use FTP method.

1. Download the "Files" using CodeCanyon - "Downloads" tab.
2. Before you attempt to upload your Theme you must unzip "wpnotif.zip" downloaded file
3. Open your FTP client and open your plugins folder (*wp-content/plugins/*)
4. Move unzipped (*manual.zip*) files to your Plugins folder. Now go to your WordPress Admin Dashboard => Plugins => Installed Plugins and then Activate the Digits Plugin from there.

If you need help installing WordPress see the link below:

Understanding Settings Options

Our aim is to give provide maximum possible features so you as a site owner can configure plugin the exact way you want and all this by keeping interface easy to understand. But still its always good to know about all the options.

The plugin is divided into three main sections

1. Gateway
2. Notifications
3. Send Quick SMS

We'll discuss each of them and the options they offer.

Gateway Tab

Under this, you'll be able to set up the gateway(s) you are planning to use for sending SMS. You can also setup the plugin to send WhatsApp messages alongside SMS by switching on the option or if you don't want to use SMS and just WhatsApp or vice versa, even that is possible.

The screenshot shows the 'GATEWAY' tab selected in a navigation bar. Below the navigation bar, there are three tabs: 'GATEWAY', 'NOTIFICATIONS', and 'SEND QUICK SMS'. The main content area is divided into several sections:

- All Countries:** A toggle switch is set to 'ON'.
- SMS Gateway:** A text input field contains 'Twilio'.
- App ID:** A text input field contains '985365874569'.
- Client Secret:** A text input field contains '542135484513235186843'.
- TEST GATEWAY SETTINGS:** A text input field labeled 'Your Mobile Number' is followed by a green 'TEST' button.
- Error Message:** A box displays 'Error Code: 2365' and a placeholder text 'Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.' Below this is a blue link: 'Check on SMS Gateway's website'.
- WhatsApp:** A toggle switch is set to 'OFF'.

Two black arrows point to the 'ON' toggle switch and the 'WhatsApp' toggle switch.

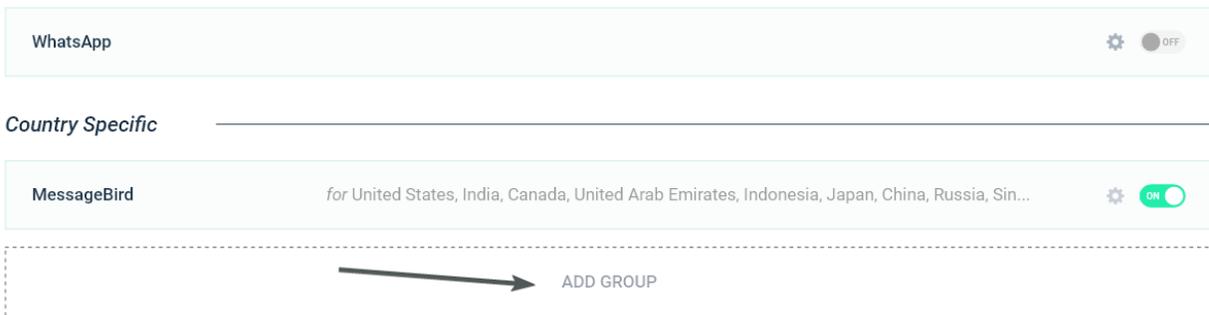

– All Countries

Gateway Setup in this will be used for sending SMS to all countries *excluding* the ones for which you setup gateway specifically under **Country Specific**. You can also turn off this option if you want to send SMS to any country or in case you want to send SMS to some specific country then set it up under Country Specific option and turn off All Countries.

– Country Specific

This option can be used to setup different gateways for different countries, this is very helpful when you have a website which has customers from different countries, using this option and setting up different gateways can reduce your SMS cost drastically and improving fast deliverability.

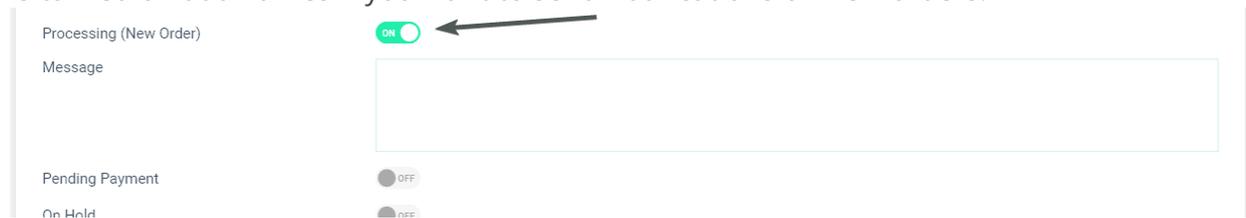

By clicking on **Add Group** button you add additional gateways.

Notifications Tab

Here you will be able to turn on WooCommerce order status automatic notification, so whenever the status of the order is changed to something these notifications will trigger if they are turned on. You can turn these on/off for customers and admins specifically.

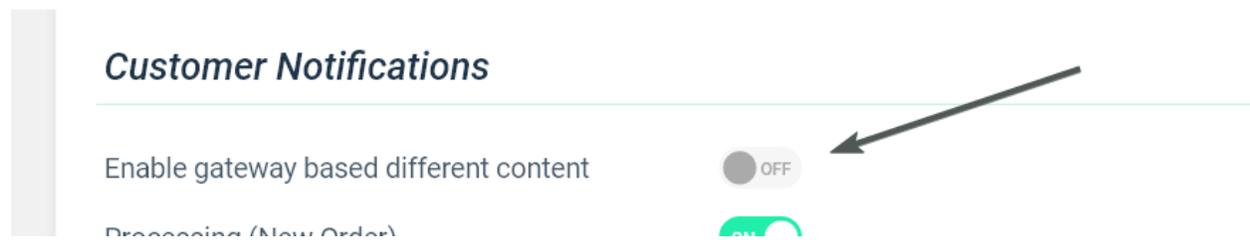

Note: By default WooCommerce's new order status is set to **Processing**, so make sure this is turned on at all times if you want to send notifications on new orders.

Enable Gateway Based Different Content

This option is available under the **Customer Notification** section, by turning this *ON* you can setup different gateways for different content. For example (use case):

1. If you just want to send New Order notification to countries which are setup for Twilio Gateway and for all other countries you want to send notification for all order updates, you can set this up by turning this option on and selecting the status and their content for each gateway you have set up in Gateway Tab.
2. If you want to send SMS in different languages for the countries you've setup in Gateway Tab, by turning this feature on all the gateways you have setup in Gateway Tab will get listed and you can change the content for each of them.

Send Quick SMS

From here you can send quick SMS to any number you want. You can also send SMS to multiple numbers by separating different numbers with a comma (,). If you have different gateways for different countries set up then the message will be routed from the gateway you have setup for that particular country, in case there are multiple numbers from different countries, in this case, the numbers will be routed from their respective gateways.

Placeholders for Message Template

Below is the list of placeholders you can use in your message template. Below shortcodes are grouped, so that they are easy to read and find.

<code>{{sitename}}</code>	Site Name
<code>{{wc-order}}</code>	Order Number
<code>{{wc-order-id}}</code>	Order ID / Post ID
<code>{{wc-order-date}}</code>	Order Date
<code>{{wc-order-status}}</code>	Order Status
<code>{{wc-payment-method}}</code>	Payment Method
<code>{{wc-transaction-id}}</code>	Payment Transaction ID
<code>{{wc-shipping-method}}</code>	Shipping Method
<code>{{wc-product-names}}</code>	All Item / Product Names in Order
<code>{{wc-total-products}}</code>	Total Number or Products in Order
<code>{{wc-total-item}}</code>	Total Number of Items in Order
<code>{{wc-order-amount}}</code>	Total Amount (Incl. Tax)
<code>{{wc-discount}}</code>	Total Discount Amount
<code>{{wc-tax}}</code>	Total Tax Amount
<code>{{wc-order-amount-ex-tax}}</code>	Total Amount (Excl. Tax)
<code>{{wc-shipping-cost}}</code>	Shipping Cost
<code>{{wc-refund-amount}}</code>	Refunded Amount
<code>{{wc-refund-reason}}</code>	Refund Reason

{{wc-billing-first-name}}	Billing First Name
{{wc-billing-last-name}}	Billing Last Name
{{wc-billing-company}}	Billing Company
{{wc-billing-address-line-1}}	Billing Address Line 1
{{wc-billing-address-line-2}}	Billing Address Line 2
{{wc-billing-city}}	Billing City
{{wc-billing-postcode}}	Billing Postcode / ZIP
{{wc-billing-state}}	Billing State / County
{{wc-billing-country}}	Billing Country
{{wc-billing-email}}	Billing Email
{{wc-billing-phone}}	Billing Phone

{{wc-shipping-first-name}}	Shipping First Name
{{wc-shipping-last-name}}	Shipping Last Name
{{wc-shipping-company}}	Shipping Company
{{wc-shipping-address-line-1}}	Shipping Address Line 1
{{wc-shipping-address-line-2}}	Shipping Address Line 2
{{wc-shipping-city}}	Shipping City
{{wc-shipping-postcode}}	Shipping Postcode / ZIP
{{wc-shipping-state}}	Shipping State
{{wc-shipping-country}}	Shipping Country

How To Update WPNotif Plugin

When a new update comes out, you'll get a notification from Envato regarding the plugin update.

There are four ways you can do it:

1. From Installed Plugins Page

This is the easiest and the most recommended method

Just make sure your plugin is registered with the purchase code and then you can simply update the plugin from your installed plugins page, or WordPress Updates page just like other plugins.

2. Envato Automatic Updates

Envato provides a plugin for automatic updates, which can be found from this link <http://envato.github.io/wp-envato-market> You'll find the other instruction on this page too.

3. Using WordPress Admin Panel

This is them most easiest way, but a bit longer. Head to your Plugins -> Installed Plugin and deactivate deactivate and delete digits plugin. After the deletion you need to upload the plugin installation zip file as a new plugin. Don't worry, your data will not go anywhere, just the plugin files will get updated.

4. Using FTP

This method required FTP access to your server. Just head to your wp-content/plugins/digits folder and replace the files with the updated files.
